Work Instruction for cleaning leather dress covers

Deep Cleaning

- Once per month, use Perrone's Deep Cleaner (#DC-232) to remove soil build-up on leather dress covers. Spray liberal amount of product on clean, lint-free rag or cloth and wipe down covers, panel by panel.
- Remove any excess build-up of chemical on dress cover.
- For heavier soiled areas, a soft bristle brush may be required. Apply product to bristles of brush and gently agitate leather in a circular motion until soil is removed.
- DO NOT spray Deep Cleaner or other products directly on leather.
- Allow leather to air dry prior to using Perrone's Leather Conditioner.

Leather Conditioning

- Dispense Perrone Leather Conditioner (#CN-116) into clean, lint-free rag or cloth and wipe down covers, panel by panel.
- Lightly remove an excess build-up of chemical on dress cover.
- Allow to air dry.

Ink Removal

- Apply a small amount of Perrone's Ink Remover (#IR-102) to soiled area.
- Allow product to stand on soiled area for 3-5 minutes.
- Gently agitate chemical with clean, lint-free rag, cloth or cotton swab - turning constantly as not to redeposit ink on leather.
- Additional applications may be required. If so, dry area and repeat process.
- Note: If ink stains have dried into leather, Perrone's ink remover will remove surface ink – appearance will be to lighten the stain.

Inspection for damage

- While Deep Cleaning dress covers, watch for the following scenarios that would constitute repair:
 - Dried Ink Stains
 - Rub-through
 - Scratches and Scraps
 - Gum
 - Solvent burns
